Practice baby for nursing training

Nurses face very special challenges in infant nursing. This is why careful training in this area is so extremely important. With the Nick nursing baby, you can prepare your trainees ideally for this demanding task.

Our new nursing manikins offer practice opportunities for all important nursing measures on the infant.

The following procedures are possible on the manikin:

- Gastric tube (placement, feeding, irrigation and suctioning)
- Tracheotomy (insertion and suctioning)
- Gastrostomy / PEG (care)
- Suprapubic catheter (changing, care)
- Bladder catheterization (insertion, placement and care)
- Ileostomy, colostomy, double-barreled stoma (basic care only)
- Inserting rectal thermometers
- Basic care measures such as washing, wrapping, etc.
